LinkedIn: [linkedin.com/in/chaninkou/](https://www.linkedin.com/in/chaninkou/)

Volunteer and Community Service

Google Project: Cascade the Code, Cal State L.A

April 2017

- Assisted in recruiting high school students and introduced them to opportunities within the field of computer science.
- Introduced the design of HTML and CSS to eight students by providing examples and hands-on experience with Notepad++.

MESA Prelims, Cal State L.A

March 2016

- Joined a team to distribute food, directed high school students to correct locations on campus, and gave advise about college experience.

Project

Reverse Multiplication Table

- Used JavaFX GUI-based program and CSS styling that shows a 10 X 10 multiplication table, with the labeled display the problems, rather than the actual solution.

Management Software

- Created a JOptionPane that keeps track of students' data and available courses.
- Designed a way for users to import and export from a csv file.

Monster Attack Tracker

- Used JOptionPane I/O that will save or delete lists of monster attacks to a comma separated value of csv file.
- Implemented a way for users to keep track of any monster attack.

Bitwise Steganography Program

- Analyzed the best way to hide and recover a secret message that is in a PPM image.
- Used JavaFX that loads a PPM image data into the object.
- Worked on image color manipulation by converting images to different color.

Work Experience

McDonald's, Crew Member, Temple City, CA

Summer 2017

- Coordinated with a team to provide the best customer service by introducing new product, maintaining food quality, developed new idea, and solved any complaints.
